

Project & Contract Management

Agile Project Management Master Class

Course Introduction

Project management allows organizations to assure that projects are able to adapt to the ever-changing business needs. To minimize risk, components are built in small, discrete timeframes. In today's business realm, the use of Agile as an approach to managing projects has been increasing dramatically over the last several years. Researches have validated that value of Agile in decreasing product defects, improving team productivity, and increasing delivery of business value.

This BOOST training course provides the attendees with the fundamental knowledge about Agile methodology and the skills, tools and techniques needed to successfully manage the project using the Agile principles and concepts.

Target Audience

This BOOST course is beneficial for Project team, project managers, functional managers, system analyst, business analyst, individuals seeking knowledge about agile management.
